

Balloon 230x300mm for RoBust LED Corn

Šviesos technikos aksesuaras šviestuvui

12529

BAI Balloon 230x300mm for RoBust LED Corn Inflatable Polyester Fire retardant 302 Waterproof level 4

This polyester balloon is a possible replacement for the balloon that is supplied as standard with article 146544. It serves as a distributor of the large amount of light that the Corn light source emits. This is to protect the eyes if one were to look directly into the light source and to provide a nice even light distribution. The balloon is automatically inflated by the internal fan of the Corn when it is placed over it with the velcro strip.
