*The lamp emissions reach the subcutaneous layer of the skin where heat is dissipated more efficiently. This gives a more diffuse and pleasant warming effect. Dr. Fischer Vitae lamps are like HeLeN lamps, infrared halogen lamps. But Vitae lamps have a colour temperature range of 1750K and 2000K. They almost can already be considered medium wave emitters because they emit more medium wave infrared than HeLeN lamps do. As a result, the balance between short and medium IR for a Vitae lamp is perfectly suited to body heating (infrared cabins), combining as it does the heat effect (skin penetration by short IR) and heat feeling (given by medium-wave IR to warn against excess heat. Vitae lamps only emit low amounts of visible light, even without coating. Another peculiarity of Vitae lamps is their linear power spectrum, which ranges from a comparatively low 300W up to 1300W.*
